Summary

Computer Science student with strong foundations in backend development and machine learning, passionate about building scalable systems and data-driven applications. Experienced in developing full-stack applications and ML-based data analysis systems with a focus on clean architecture, efficient APIs, and data-driven solutions.

Education

Indian Institute of Information Technology, Sri City <i>Bachelor of Technology – Computer Science Engineering (CGPA: 9.61/10)</i>	2024 – 2028 <i>Andhra Pradesh, India</i>
---	--

Technical Skills

Languages: C++, Python, JavaScript, TypeScript, Java, SQL
Backend: Node.js, NestJS, REST APIs, PostgreSQL
Machine Learning & Data: Scikit-learn, XGBoost, Pandas, NumPy
Tools & Platforms: Git, Figma, Vercel
Core Subjects: Data Structures & Algorithms, DBMS, OOPs, Computer Architecture, Computer Networks, Operating Systems

Experience

Teaching Assistant <i>IIT Sri City</i>	Jan 2026 – May 2026
--	----------------------------

- Guided junior students in Computer Architecture laboratory sessions covering data representation, floating-point operations, and Bomb Lab analysis.
- Assisted students in debugging low-level programs and understanding system-level concepts through practical exercises.

Student Life Council Member <i>IIT Sri City</i>	2025 – Present
---	-----------------------

- Coordinated student activities related to mess, sports, hostel, and campus engagement initiatives.
- Assisted in organizing campus events and supporting communication between students and administration.

Projects

Restaurant Reservation & Capacity Management Platform | *NestJS, TypeScript, JavaScript, HTML, CSS*

- Developing a full-stack platform to manage restaurant reservations and real-time seating operations.
- Implemented live table availability tracking and automated reservation lifecycle management.
- Designed role-based dashboards for customers, staff, and administrators with distinct workflows.

Air Quality Missing Value Imputation using ML | *Python, Scikit-learn, XGBoost, Pandas, NumPy*

- Built machine learning models for imputing missing air quality values across 39 CPCB monitoring stations using spatiotemporal feature engineering on 2.7M+ observations.
- Engineered temporal lag features and spatial nearest-station averages using KNN-based mapping techniques.
- Developed Random Forest and XGBoost models using multiple feature configurations for pollutant prediction.
- Achieved R^2 up to 0.93 through 5-fold cross-validation and concentration-wise analysis.
